

Fast Facts

Ground Military: Vehicle, C4ISR & Soldier Applications

In the harsh and unforgiving environment of the modern battlefield, it is essential that every single component is fit for purpose. Working closely on site with our OEM and ODM customers has given our engineering team a deep understanding of the changing market trends and requirements of land based military vehicles, C4ISR systems and radio communications, enabling them to engineer the best possible component solution.

Military Vehicle

AB / SB-ORD

- Heavy interconnections for vehicle slave starting
- 24V Inverter

C4ISR systems

AB05 / AB06

- 10-76 pin form
- simple low-voltage power harnessing
- Multi-branched and over-moulded data & communications harnessing
- Basic military junction boxes to complex systems

Soldier

ABSC2

- Miniature, rugged, high-density, sealed connectors for soldier harnessing

Other

Generator sets in exposed Arctic conditions
Engine compartments of fighting vehicles
Electronic controls and alarm units.

TT design and manufacture the connectors, harnesses, distribution boxes and control units.
